Caeli Wind Launches New Ready-to-Build Asset Class on Its Platform

Pilot Project “Everest” Offers Capacity Up to 518 MW in North Rhine-Westphalia, Germany

Berlin, January 16, 2025 – Caeli Wind, Europe’s leading innovator in digital wind energy project planning and brokering, is proud to announce the addition of Ready-to-Build wind farm projects to its platform. This new asset class provides permitted, investment-ready wind energy projects, enabling utilities and investors to bypass the complexities of early-stage development.

The inaugural project in this category, “Everest”, is now available for investment. Located strategically in North Rhine-Westphalia, Germany, Everest offers the opportunity to build 32 state-of-the-art turbines with an initial capacity of 212 MW, and provides significant expansion potential, scaling up to an additional 306 MW.

“Introducing Ready-to-Build wind farms marks a significant milestone for our platform,” said Ben Schlemmermeier, CEO of Caeli Wind. “Our innovative approach streamlines the development process, accelerating the energy transition and making renewable investments more accessible for all stakeholders.”

Project Everest – A German Milestone

Perched approximately 600 meters above sea level with an average wind speed of 6.8 m/s, Everest combines an optimal location with the latest in wind technology. The project is permitted under the Federal Emission Control Act (BImSchG) and includes community agreements and EPC contracts with industry leaders Enercon and Vestas. Investors interested in Everest can schedule project presentations through the Caeli Wind platform at www.caeli-wind.de. Finalising investments is targeted for June 2025, with commissioning slated for 2026.

“Everest exemplifies how Caeli Wind is accelerating the energy transition by simplifying renewable energy investments,” Schlemmermeier added. “This flagship project underscores the confidence in our platform and the future of efficient, scalable, and digital wind energy development.”

Advancing Wind Energy with Ready-to-Build Projects

The launch of Ready-to-Build asset classes aligns with Caeli Wind’s mission to expedite the global energy transition by making renewable investments straightforward and

efficient. Utilising a unique AI system, Caeli Wind leverages geodata and advanced analytics to identify high-potential sites and connects developers with investors, streamlining critical steps in wind energy development.

About Caeli Wind

Caeli Wind is Europe's premier online platform for analyzing and brokering high-wind areas and projects. By connecting landowners, project developers, and investors, Caeli Wind provides expert advice and customized solutions, significantly enhancing the success rate and speed of project implementation for all parties involved. Committed to accelerating the energy transition across Europe, Caeli Wind is at the forefront of renewable energy innovation.
